

Sea Water Desalter Kit, Mark 2, Type II

Overview:

The Sea Water Desalter Kit by Van Ben Industries is a handheld, portable kit that can treat sea water, transforming it into drinkable water.

Description:

The kit contains a plastic bag that the user will fill with sea water. When one of the kit's eight chemical bars is added to the bag, the process of desalting the water begins. It takes about 60 minutes to make one pint of drinkable water.

The plastic bag has a filter that will allow only fresh water to pass, and a valve that can be opened and closed for easy use.

There is also mending tape in the kit in case the bag tears. The kit container is made out of heavy, molded plastic. In the event the bag is unusable, the kit container may be used to desalt the sea water, as well.

The Desalter Kit can be purchased individually, or in a case of ten kits.

Shipping:

There are no shipping restrictions on these kits. FOB Cincinnati.
