

M256A1 Chemical Agent Detector Training Kit

Overview:

The M256A1 Chemical Agent Detector Kit **Trainer** by TRUETECH is a simple, inexpensive device designed to train members of local governments, police, fire and first responders to detect chemical agents after an attack.

Description:

The M256A1 Trainer is used to train personnel in the detection of a variety of chemical agents. Trainees use hinged protective strips that contain ampoules for simulating blood, blister, or nerve agents. The portable, expendable unit consists of a carrying box with a handle, and 36 individually-wrapped sampler-detectors. There are five types of sampler-detectors included:

- * Twelve (12) that simulate "all clear" responses
- * Six (6) simulate nerve agents (G or V) responses
- * Six (6) simulate mustard (H) blister agent responses
- * Six (6) simulate phosgene oxime (CX) blister agent responses
- * Six (6) simulate hydrogen cyanide (AC) or cyanogen chloride (CK) responses

Shipping:

Shipping is via freight only. Kits must be shipped in a Package Group 2 Hazmat box, with a Class 9 Toxic label.
