

M272 Chemical Agents Water Testing Kit

Overview:

The TRUETECH M272 Chemical Agent Water Testing Kit is designed to test for lewisite, nerve agents G and V, cyanide and mustard chemical agents which may be present in water. It requires a minimum of training.

Description:

The kit consists of:

- * A heat resistant, plastic test container with a rubber stopper, connector, and liquid crystal temperature display.
- * Chemical agent detector tubes banded with blue or red.
- * Chemical agent test reagents.
- * Nerve agent test tickets.
- * A plastic coated instruction card.
- * Training simulants to demonstrate tests and results to trainees.
- * Waterproof matches and striking strips.
- * A tube holder that fits in the case lid, a clip, and extra rubber connectors.

Shipping:

Shipping is via freight only. Kits must be shipped in a Package Group 1 Hazmat box, with a Class 6 Toxic label. M272 kits can not be transported by air.
