

M29 Chemical Agent Detector Training Kit

Overview:

TRUETECH's M29 Chemical Agent Detector Training Kit is designed for classroom training situations. It will prepare members of local governments, police, fire and first responders to detect chemical agents after an attack.

Description:

The M28 simulates the presence, or absence, of **blister agents only**. Tests are carried out by following the simple instructions printed on the inside of the box and on sampler packets.

The M28 Trainer Kit includes a corrugated box containing the simulators, and a booklet of M8 Paper sealed in a plastic bag. It also comes with 18 individually-wrapped sampler-detectors containing the blister agent simulator, and 18 individually-wrapped sampler-detectors that contain blank samplers.

Other training kits from TRUETECH include the M28, which simulates nerve agents only, and the M256A1 Trainer which simulates blood, blister, and nerve agents.

Shipping:

Shipping is via freight only. Kits must be shipped in a Package Group 2 Hazmat box, with a Class 9 Toxic label.
