

M295 Individual Equipment Decontamination Kit

Overview:

The M295 Decontamination Kit by TRUETECH provides decontamination of your individual equipment (protective gloves, mask, hood, NBC over-boots, helmet, load carrying equipment, and weapons) through physical removal and absorption of the chemical agents, with no long term harmful side effects to the user.

The M295 is a handheld kit that consists of four (4) decontamination mitts that fit over the hand. They are sealed in soft-pack pouches. Each kit is enough to decontaminate two complete individual equipment operations. Each packet consists of a decontamination mitt filled with an Alumina based sorbant and sealed within a waterproof protective package. Each case includes twenty (20) M295 kits.

Each M295 kit will provide personnel with the ability to decontaminate their equipment quickly and easily. M295 is used for the removal of liquid contamination.

Shipping:

Shipping is via UPS Ground. No Hazmat packaging or labeling required.
